Office Action Summary

Art Unit 1756

1. This Office action is responsive to the filing of the instant application on December 13, 2001.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) The invention was described in (1) an application for patent, published under Section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-14 are rejected under 35 U.S.C. § 102(e) as being anticipated by Yu.

Yu describes, teaches and suggests the essential requirements of the instant invention as claimed through a two dimensional scaling method that determines the overlay error and overlay process window for integrated circuits. A careful review of the specification and claims shows that wafers are exposed utilizing various overlays to determine an overlay tolerance for images.

4. The reference cited on PTO-892 sets forth the state of the art for overlay tolerance determination. This patent utilizes a different type of method to determine overlay tolerance and is not applied to the scope of the protection sought.
